Innovative Surveillance Technology

Innovative Unmanned Surveillance Technology

Capital has invested a substantial amount of time and resources into our unmanned surveillance technology program. These efforts have resulted in pioneering the latest and most effective technology necessary for achieving maximum impact and return on investment with unmanned surveillance.

The Most Effective Method of Surveillance in Over 3 Decades

This method involves the utilization of Unmanned Surveillance, a non-intrusive, non-invasive, stationary surveillance that is legally placed in the vicinity of a subject's residence or selected area. A unique high-definition (HD) video camera which is remotely operated by an investigator will help videotape claimant patterns and hard to get yard activities. This method of surveillance can record for 24 hours a day for up to 7 days. This provides our clients with 168 hours of continuous surveillance. This allows us to efficiently pattern a subject, and create the best plan of action, providing the best possible video and mitigating information.

USV Video Statistics	
2015 Average Minutes of Video (3 Day Case)	56 Minutes
2015 Average Minutes of Video (5 Day Case)	70 Minutes
2016 Average Minutes of Video (3 Day Case)	49 Minutes
2016 Average Minutes of Video (5 Day Case)	78 Minutes
